EDUCATION

Pimpri Chinchwad College of Engineering <i>B.Tech in Computer Engineering</i>	Pune, India 2022 – 2026
Shri Fattechand Jain Vidyalaya and Jr. College <i>Higher Secondary Certificate</i>	Pune, India 2020 – 2022

EXPERIENCE

SAS Research and Development <i>AI/ML Intern - IoT and Analytics Team</i>	Pune, India July 2025 – Present
– Developed a Genai POC AI-powered chatbot using LLMs and OpenAI APIs, with Function calling and MCP integration – Built a POC Retrieval-Augmented Generation (RAG) pipeline for document-based question answering, enabling context-aware responses across internal knowledge sources. – Designed a semi-automated RAG evaluation pipeline with human-in-the-loop validation, reducing testing time by 80% and improving evaluation reliability. – Integrated MCP servers with Jira, Confluence, and TestRail to automate workflows and metadata retrieval, reducing manual task time by 40% for internal teams. – Implemented server-side automation and ETL pipelines to streamline data processing, improving pipeline efficiency and reducing turnaround time for internal data workflows. – Developed automated Java unit test cases, increasing code coverage to 65% and reducing expected testing effort from 1 month to 15 days using LLM-assisted generation. – Collaborated using Git/GitHub and standard SDLC practices, contributing to team deliverables and maintaining code quality through version control and reviews.	

PROJECTS

Weather Chat-bot with MCP Server and CI/CD Deployment <i>MCP, Docker, GitHub Actions</i>
– Developed an AI-powered weather chatbot using LangGraph with tool calling via a custom MCP server. – Integrated weather APIs for real-time weather, geolocation queries, and forecast retrieval. – Designed a modular MCP server exposing tools for scalable external API integration. – Containerized the application using Docker and deployed it on Hugging Face Spaces. – Implemented CI/CD pipelines with GitHub Actions for automated builds and deployments.
Transaction Processing & Fraud Detection System <i>Python, FastAPI, PostgreSQL, Redis, Docker</i>
– Developed a backend financial transaction processing system using Python and FastAPI. – Built RESTful APIs with Pydantic validation for creating and analyzing transactions. – Implemented rule-based fraud detection using risk scoring based on transaction amount, frequency, and location anomalies. – Integrated PostgreSQL with SQLAlchemy ORM and optimized queries using Redis caching. – Containerized the service with Docker and implemented unit testing using Pytest.
Movie Recommendation System <i>Python, Streamlit, Scikit-Learn, Pandas</i>
– Developed a movie recommendation system using content-based filtering techniques. – Utilized TF-IDF vectorization and cosine similarity to suggest movies based on user preferences. – Built an interactive UI using Streamlit and deployed the application on Streamlit Cloud.
WanderLust <i>Node.js, Express.js, MongoDB</i>
– Developed a full-stack travel listing platform with REST APIs and authentication using Passport.js. – Implemented MongoDB data models, server-side validation, and cloud-based image storage integration.

TECHNICAL SKILLS

- Programming:** Python, JavaScript, C/C++, R
- Frameworks & Libraries:** Node.js, Express.js, FastAPI, React, TensorFlow, Scikit-learn, LangChain, LangGraph
- Tools & Databases:** Git, GitHub, Docker, Jenkins, GitHub Actions, Postman, MongoDB, MySQL
- Concepts:** REST APIs, Retrieval-Augmented Generation (RAG), Tool and function calling, ETL pipelines
- Languages & Soft Skills:** English, Hindi, Marathi, Japanese — Communication, Problem Solving, Team Collaboration

ACTIVITIES & ACHIEVEMENTS

- Webmaster, ACM PCCOE
- 2024 – 2025
- Anchor, International Relations Cell PCCOE
- 2024 – 2025
- Solved over 400 Leet code problems
- AWS udemy course Certificate 39 hours
